## Instructions for using Grandpa's Chicken & Poultry Feeders

The platform has been detached for packaging.

### TO ATTACH PLATFORM

- 1 Remove the bolts from the conduit pipe
- 2 Line up holes with steel channel arms, push up firmly into place
- 3 Bolt tightly with the 4 bolts.

### WARNING

- Do not use with young chickens as they can hop into feed tray risking injury or death when the lid closes.
- During the training period all extra food (scraps etc...) must be placed inside the feeder or stopped until training is completed.
- The feeder can be used inside or outside but must be on a flat / level surface to function correctly. Oil the working joints occasionally.
- Keep area under platform clear of debris and long grass so not to reduce the opening action. Any build up of muck on the platform should be scrapped off.

### TROUBLE SHOOTING

Some nervous chickens and old chickens can take longer to train. Don't feed alternatives unless in feeder. Ensure there is no movement of lid or platform in the 1st setting. Fill the feeder up to reduce noise once in permanent position. Some weight attached to the platform (temporarily) will slow down the closing action and reduce noise.

For any personal queries about the feeder or help for all countries to e-mail [windsongenterprises](mailto:windsongenterprises) or [alla.grandpas@yahoo.com](mailto:alla.grandpas@yahoo.com)

## Instructions for using Grandpa's Chicken & Poultry Feeders

During the training process it is not advisable to fill the feeder as pests will have access to the food and it is exposed to the weather (if located outdoors). Daily feeding at this point will encourage the chooks onto the feeder and direct them to the food source.

### ATTENTION

The chickens must be trained properly to use the feeder.

Lift the lid of the feed tray until the arms are above the top holes on the side of the food hopper.

Now insert the bolts from inside the feeder below the arms, put the washers and nuts on and tighten.

This will hold the lid up so the chickens can access the food. Leave for 1 week, then lower the bolts to the lower holes.

This allows the platform and the lid to move a little allowing the chickens to get used to the movement.

Leave it in this position for at least a week, then remove the bolts and the chickens will readily stand on the platform opening the lid so they can feed.

### WEEK 1 1ST Setting

Locked fully open bolts in top holes.  
There must not be any movement in this setting

### WEEK 2 2ND Setting

Partial movement of platform & feed tray lid,  
bolts in lower holes

### PERMANENT Setting

Feeder fully closed apart from when chickens are feeding.
